Overview

Do you need to capture a website, social media feed, or other online content before it goes offline, is deleted, or is redesigned?

Archive-It's Web Snapshot Service uses our custom open-source tools and expert team to preserve full snapshots of web content.

These archived versions can be revisited in the future and retain the original site's look, feel, and functionality, just as it was at the time of capture.

Greenpeace International employed Archive-It's Web Snapshot Service to preserve their websites (left) before a planned redesign (right).

Features

Support

You choose the websites, social media feeds, or online documents to archive — our staff handles the rest.

Access

Share snapshots publicly on archive-it.org, through the Wayback Machine, or privately with selected users. Snapshots include full-text search and metadata. We also offer tools to integrate snapshots with your live website or digital collections.

Storage

Your archived data is stored in multiple secure copies at the Internet Archive's independent data centers. You can download it at any time.

Turnaround

Most snapshots are completed within 30 days.

Pricing

Costs vary based on the website's size, content, and complexity.

Custom quotes are available for small, large, or specialized projects.
