

REC Simple250 LP-250 Foothill Effect Report

Part 3:

Full-Service Foothill Effect Stations with
Contour Overlap

June 29, 2021

Michelle Bradley, CBT
REC Networks
11541 Riverton Wharf Rd.

About Foothill Effect and recommendations

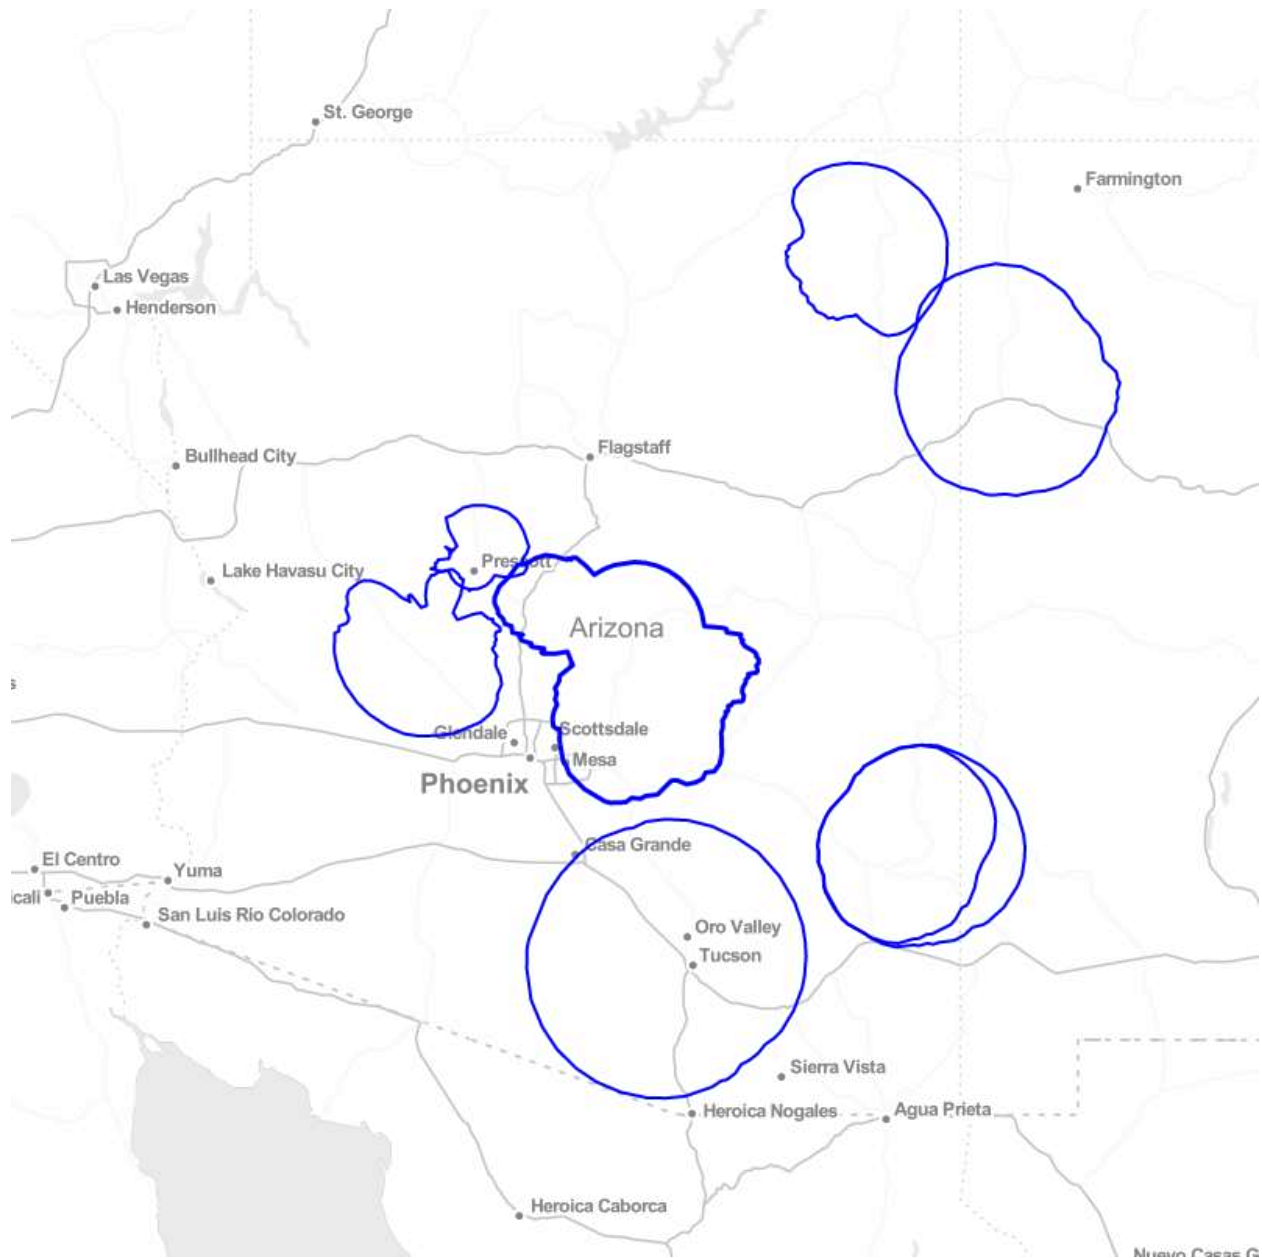

See Part 1 of this report in a separate document for details.

Individual Full-Service FM station contour maps

In this section, we show the contour maps of Full-Service FM stations that are in the non-reserved band (Channels 221~300) where there is contour overlap between the subject FM station's interfering contour with the protected service contour of other full-service FM stations. Super-power Class B and C stations that operate with a service contour in excess of 105% of their class maximum are not shown as subject stations.

As with the LPFM maps, the colors of the curves are associated with the subject station's appropriate interfering contour with the appropriate service contour for the other station. Subject station contours are shown with the thicker lines. Overlap happens if a thick contour and a thin contour of the same color overlaps.

REC has identified 73 licenses and construction permit authorizations where such overlap takes place.
