Simpler is Better

MANUFACTURING FEATURES

AddonSoftware's Manufacturing bundle provides an ideal solution for any type of manufacturing environment – make-to-stock, make-to-order, or mixed mode – providing accurate tracking of work in process, streamlined scheduling, and excellent tracking of manufacturing costs. The manufacturing bundle includes Bill of Materials and Shop Floor Control with scheduling along with the complete Accounting and Distribution bundles. The Manufacturing bundle provides for multiple warehouses with costs, prices, buying, replenishment, and item history by warehouse. It includes complete lot/serial number tracking throughout the manufacturing and distribution process and the output of reports, sales invoices, customer statements, vendor POs, etc. via e-mail or fax, or output in HTML or Adobe® PDF format at any time.

The **Shop Floor Control** module uses work orders to collect, store, track, and report the costs of material, labor, overhead, and outside purchases relating to the manufacture of an item or batch of items. The module is fully integrated and information automatically flows into other application modules including Bill of Materials, Inventory Control, and Purchase and Sales Order Processing. Work order history is preserved indefinitely by manufactured part number and transaction.

Multi-warehouse capable

Serial/lot inventory

Planned and quoted Work Order entry

Built-in email/fax output

Graphical planning and scheduling calendars

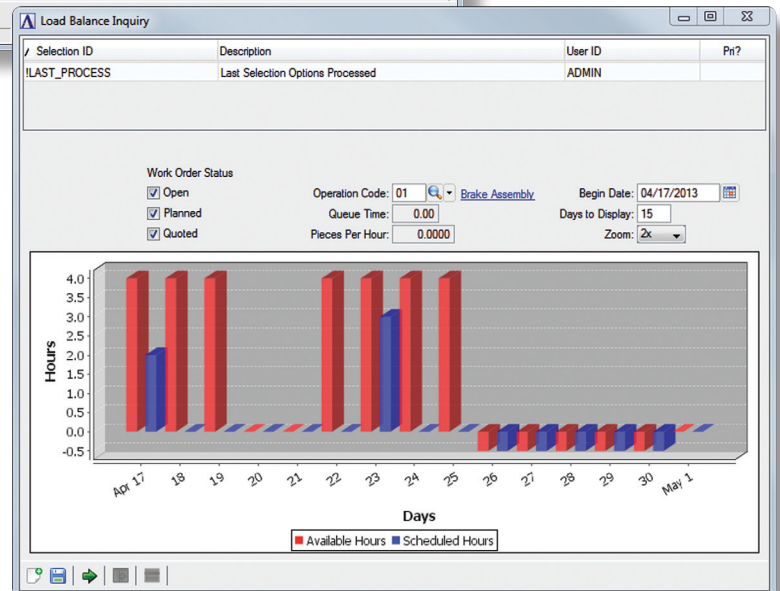

Bottleneck Analysis Report

Labor Efficiency Report

Committed Materials Report

| Item ID | Description | Required | On Hand | Committed | Available | On Order |
|---------|--------------------|------------|------------|------------|-----------|----------|
| R100.6 | Chromoly Tubing 6" | 900.4838 | 1,656.9600 | 900.4838 | 756.4761 | 66.7500 |
| R100.4 | Chromoly Tubing 4" | 1,397.2306 | 1,592.3385 | 1,397.2306 | 195.1079 | 100.0000 |
| 4000 | Paint - Silver | 7.8203 | 255.0558 | 7.8203 | 247.2355 | 0.0000 |

Release Work Order function incorporates a grid that highlights any shortages

Load Balance Inquiry presents real-time filtering and graphical charting

The **Bill of Materials** application provides unlimited levels of material usage and has features that easily define and track material, labor, subcontract, and overhead costs. Manufacturing cost accuracy is one of the system's primary strengths. Built-in flexibility allows you to define your materials in any unit of measure, and adjust factors for scrap and yield making accurate material requirements.
