

BASIS International Ltd.

"I appreciate BASIS' quick and knowledgeable support during high stress events when time is money. Recently, we called upon BASIS to troubleshoot a performance issue that had us in deep trouble. BASIS assigned several engineers to work with my team who were able to quickly isolate the issue to a third party Java applet. BASIS delivered big company knowledge with small company nimbleness."

Hamilton Dutcher
Director of IT
Moneytree Inc.

The Big Little Software Company

Allow us to introduce ourselves.

We are BASIS International Ltd., a global software company **big and stable** enough to be a reliable partner with thousands of companies all over the world, yet **small and flexible** enough to deliver customized solutions to meet today's business challenges. Our software developer community is a worldwide network of partners for whom BASIS products form the foundation for proven and reliable software solutions.

Our ongoing mission since 1985 is delivering an innovative programming language, database products, development tools, and an application framework for our community to build their applications upon. We are committed to delivering platform independence to the server and client, including browser-based mobile clients.

Your Complete

BASIS International Ltd. offers development tools for database-centric business applications to the FoxPro community. From the mature object-oriented programming language, **BBj**[®] - Java made easy, to the powerful rapid application development tool, the **Barista**[®] **Application Framework**, BASIS is ready to support your development efforts for both native client/server applications as well as the new era of cloud and browser deployment. Transition your FoxPro application at your own pace as others are doing. You have choices with BASIS. Move your data to BASIS technology and access your FoxPro database from your new cloud-enabled development using JDBC while developing anew with BASIS.

Language

BBj's easy-to-learn syntax and API will feel comfortably familiar. BBj comes with a built-in database that allows SQL access as well as direct access to read, write, and lock single records with a single statement. If you prefer, use BASIS' ESQL or a standard SQL database like Oracle, Microsoft SQL Server, or mySQL. BASIS' renowned platform independence provides developers with new business opportunities as does its browser deployment capability from a single code source.

Development Tools

Barista is an efficient GUI RAD tool that also provides code transparency and granular programmer control. A data dictionary-driven development framework and run-time engine, Barista quickly generates GUI forms and queries and the business logic for data entry, editing, deleting, sorting, and filtering of data. Barista includes a long list of built-in utilities and functionality that can both dramatically reduce development time and replace costly third party products.

Application Building Blocks

AddonSoftware® by Barista, is a fully-integrated business planning solution that effectively manages mid-market business accounting, distribution, and manufacturing operations. AddonSoftware demonstrates the synergistic power of BBJ and Barista by providing vertical market application developers with the building blocks for their own customized Barista applications.

AddonSoftware Cloud Services is a new and simpler way of deploying and upgrading your enterprise resource planning (ERP) software.

Now, you have the choice of running BASIS solutions on premises, just like you are used to, or online through an external host in a cloud environment – one solution and one software for both options.

AddonSoftware Cloud Services gives you another option in providing the best IT strategy for your customer's business. It makes AddonSoftware more affordable to use, own, and deploy.

Trusted – Steeped with over 25 years of expertise

Modern – Keeps pace with current GUI look and feel standards

Flexible – Delivers cross-platform GUI for Windows, Linux, Mac, UNIX, and browser of your choice

Extensible – Incorporates commercial or open source Java libraries

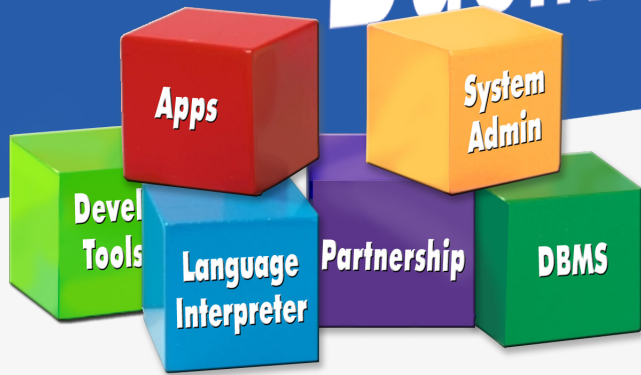

Productive – Provides efficient custom development using the Barista tool

BASIS has been producing development tools for business applications since 1985 with the commitment to backward compatibility, protecting decades of development effort by its partners.
