	"With the increasing popularity and use of commercial cloud services like Dropbox in higher education amid the increasing privacy concerns around the NSA and other disclosures, ownCloud offers a safe alternative with the same ease of use and reliability. In this private cloud, sensitive data remains completely in the control of the academic institutions – we run the service in-house, in accordance with German data protection laws."	"ownCloud offers a safe alternative [to commercial cloud services] with the same ease of use and reliability. In this private cloud, sensitive data remains completely in the control of the academic institutions – we run the service in-house, in accordance with German data protection laws."	- Dr. Raimund Vogl, head of the Centre for Applied Information Technology (ZIV) at Münster University and consortium manager for Sync & Share NRW, an association of 18 research and applied science universities in North Rhine-Westphalia (NRW), Germany
	"ownCloud has all of the features that our system required, including the ability to distribute the systems platform across three geographically dispersed locations. But equally important, we've watched ownCloud closely over the past two years and they have demonstrated steady innovation and a commitment to reliability."	"ownCloud has all of the features that our system required, including the ability to distribute the systems platform across three geographically dispersed locations. But equally important, we've watched ownCloud closely over the past two years and they have demonstrated steady innovation and a commitment to reliability."	- Dr. Raimund Vogl, head of the Centre for Applied Information Technology (ZIV) at Münster University and consortium manager for Sync & Share NRW, an association of 18 research and applied science universities in North Rhine-Westphalia (NRW), Germany
	"Getting the consortium together across 22 independent entities for a project of this scale was both intense and challenging. We used an incredible amount of due diligence to consider all of our options. In the end, ownCloud was clearly the right choice."	"Getting the consortium together across 22 independent entities for a project of this scale was both intense and challenging. We used an incredible amount of due diligence to consider all of our options. In the end, ownCloud was clearly the right choice."	- Dr. Raimund Vogl, head of the Centre for Applied Information Technology (ZIV) at Münster University and consortium manager for Sync & Share NRW, an association of 18 research and applied science universities in North Rhine-Westphalia (NRW), Germany

CERN	"Our pilot service with ownCloud meets the users' requirements for platform integration, usability and ease of access. Therefore we are currently scaling up the pilot service to expose it to a larger user community. The open source aspect of ownCloud is the key element for future integration and extension in our environment. We see a potential for the ownCloud platform to evolve from a system focused on handling document files into a system for handling scientific datasets on a larger scale. We are looking forward to testing new functions and improving performance in ownCloud 6."	"The open source aspect of ownCloud is the key element for future integration and extension in our environment. We see a potential for the ownCloud platform to evolve from a system focused on handling document files into a system for handling scientific datasets on a larger scale."	-Dr Jakub T. Moscicki, IT Data Storage Services, CERN
SWITCH	"Although ownCloud exceed all of our IT requirements, we didn't select them on our own – our users did. A key part of our evaluation process was to pilot two solutions with a cross section of future users. The feedback was universal – ownCloud was a user favorite. "	"Although ownCloud exceed all of our IT requirements, we didn't select them on our own – our users did. A key part of our evaluation process was to pilot two solutions with a cross section of future users. The feedback was universal – ownCloud was a user favorite. "	-Patrik Schnellmann, Business Development, SWITCH
SWITCH	"In our first five months more than half of the institutions had already adopted the ownCloud based solution. It's a remarkable testimony to the need for universal file access and the intuitive user interface ownCloud offers."	"In our first five months more than half of the institutions had already adopted the ownCloud based solution. It's a remarkable testimony to the need for universal file access and the intuitive user interface ownCloud offers."	-Patrik Schnellmann, Business Development, SWITCH

LANDSPÍTALI	"For the first time, we were able to guide people towards a convenient and safe solution for sharing documents and files."	"For the first time, we were able to guide people towards a convenient and safe solution for sharing documents and files."	Ágúst Kristján Steinarrsson, Clinical Engineering and IT https://cloud.owncloud.com/index.php/s/WVWI6yUfd0HLcWC
plusserver	"I see it as my duty to educate (potential) customers. One might think that the dangers in terms of data protection are so eminent that they have reached even the last corners. But unfortunately, that is still not the case. Many authorities find it difficult to make the switch and have reservations about open source solutions – often out of unawareness. At the same time, we frequently see inhibitions to take the first step and initiate change. We need to better explain how we can help public institutions and what is needed now to secure themselves while freeing themselves from dependencies. Our partnership with ownCloud thereby is an important signal for Digital Sovereignty and Data Sovereignty to the market."	"Our partnership with ownCloud thereby is an important signal for Digital Sovereignty and Data Sovereignty to the market."	Alexander Wallner, CEO plusserver https://owncloud.com/news/interview-with-alex-wallner-ceo-of-plusserver/
